SUMMARY:

On September 5, 2017 at 03:25 p.m. ET the National Response Center received an update to an earlier report (NRC# 1188748) indicating that the amount is now a discharge of 15,330 gallons (~365 barrels) of crude oil and 3,192 gallons (~76 barrels) of produced water. The incident was initially discovered at 3:30 p.m. CT on August 29, 2017 near the town of Cuero, TX (De Witt County) at latitude 29-06'46" N and longitude 97- 13'57" W. The discharge has reportedly been secured and was from a storage tank due to flooding from Hurricane Harvey. Impact was reportedly into a nearby creek which is a tributary of the Guadalupe River. EPA Region Six has jurisdiction as the pre-designated Federal On- Scene Coordinator.
